Graves' Disease and Its Influence on the Anti-Thyroid Drug Market

Graves' disease, a significant cause of hyperthyroidism, is becoming increasingly prevalent, thereby driving the demand for anti-thyroid drugs. According to the National Library of Medicine, Graves' disease is the most common cause of hyperthyroidism in developed countries,

particularly affecting individuals between 30 and 60 years of age. Women are five to ten times more likely to develop the condition than men. As the incidence of Graves' disease rises, so does the need for effective anti-thyroid treatments, fueling market growth.
