Definition: Software designed to manage and streamline the production, distribution, and delivery of documents and information. It ensures that the right information reaches the right

person at the right time, often including features for document formatting, distribution, and archival.

Market Trends:
• Analyzing output data with big data analytics can reveal trends and patterns, like the most popular document types, the busiest printing periods of the day, and the departments utilizing the most printing resources. Through the more effective allocation of printing resources and the scheduling of printing tasks during off-peak hours, output management procedures can be optimized with the use of this data.

Market Drivers:
• Digital transformation solutions are being adopted by organizations more frequently to increase their agility and efficiency. It is an essential part of digital transformation programs because it may assist businesses in automating labor-intensive output management processes including document routing, printing, and archiving. Employees may be able to concentrate on more strategic work as a result. Boost output consistency and precision. Error rates can be decreased and customer satisfaction raised as a result.
