Definition:

Desktop document scanners are small, high-resolution machines that may be used right from a desktop or workspace to digitally transform paper documents. These scanners are typically used in office settings to digitize paperwork such as invoices, contracts, and reviews, which makes it easier to store, share, and manage online. Automated file feeders (ADFs), which enable batch scanning of several pages and speed up the process while reducing manual coping, are a common feature of desktop record scanners. They offer a range of features, such as optical character recognition (OCR) to transform scanned text into editable formats and photo enhancing tools to improve test quality. These devices are prized for their practicality, usability, and compatibility with file control systems, which enable businesses to simplify processes and cut down on dependency.
