“

The digital signage market is expected to witness growth in interactive content, AI integration, IoT utilization, and enhanced data analytics for personalized and engaging customer experiences.”

*Allied Market Research*

Digital signage is an emerging technology, which offers high image resolution and better picture quality over traditional displays. It offers enhanced contrast over the traditional OLED and LED media board display technologies. Moreover, digital display panels have features such as enhanced response time. In addition, the consumption of power by digital signage is less as compared to other technologies such as LEDs and OLEDs. Digital signage depends majorly on hardware components that ensure the delivery of high-quality content. These displays have replaced the traditional small and micro-display screens with large wall-sized LED and LCDs, used

across various industries. In the current business scenario, it is crucial to employ efficient systems for advertising, owing to the development of numerous user engagement devices and applications. A digital display panel is a cost-effective medium of promoting and branding any product or service; this advantage drives the digital signage market.

Digital signage is a class of large display screen formats that improve the visual experience with its professional-grade image quality and are used for endorsing and advertising. These displays have replaced the traditional small and micro-display screens with large wall-sized LED and LCD displays, used across various industries. They are designed for applications that require the vendors to engage their customers/audiences with its wider viewing angle and to extract maximum effectiveness from the marketing messages.

The decline in the cost of displays and improved customer experience are the factors that drive the growth of the digital signage industry globally. In addition, the development of government bodies as well as fast growing educational sector contributes toward the growth in digital signage industry. Technological developments including near-field communication are expected to create greater opportunities. The advent of touch screen technology is also expected to open new avenues.

The rise in demand for bright and power-efficient display panels rapid digitalization and a decline in demand for traditional billboards are the factors that drive the growth of the digital signage market. However, the deployment of widescreen alternatives such as projectors and screenless displays and the lack of standard policy and power problems hampers the digital signage market growth to a certain extent. Furthermore, emerging display technology such as micro-LED and quantum dots and an increase in the preference of electronic giants toward large screen displays offer lucrative opportunities for the digital signage market in the country.

Key market players:

The Digital Signage industry's key market players adopt various strategies such as product launches, product development, collaboration, partnerships, and agreements to influence the market. It includes details about the key players in the market's strengths, product portfolio, market size and share analysis, operational results, and market positioning.

Key market players:

- Sony Corporation
- Planar Systems, Inc.
- LG Electronics
- VOLANTI DISPLAYS
- Samsung Electronics Co., Ltd.
- Koninklijke Philips N.V.
- Panasonic Corporation
- NEC Corporation
- Viewsonic Corporation

## ISEMC (HHS TECHNOLOGY)

The Digital Signage market segmentation includes offering, product, location, end user, and region. Based on the offering, the market is divided into hardware, software, and service. In 2022, the hardware segment dominated the market, and it is expected to acquire a major market share by 2032 owing to an increase in the use of digital signage for retail and education end users. Based on product, the market is categorized into single-screen displays, video walls, and kiosks. In 2022, the kiosk segment dominated the market, and it is expected to acquire a major market share by 2032 due to an increase in investment of government and private companies in airports, public transport, and other vital sectors.

Based on location, the market is divided into indoor and outdoor. In 2022, the indoor segment dominated the digital signage market demand, and the outdoor segment is expected to acquire a major market share by 2032 owing to an increase in the use of digital signage for retail and education end users. Based on end users, the market is divided into retail, education, healthcare, corporate, stadiums, government, and others. In 2022, the other segments dominated the market, and the healthcare segment is expected to acquire a major market share by 2032.

Based on region, the hybrid capacitor market trends are analyzed across North America (the U.S., Canada, and Mexico), Europe (Germany, UK, France, Spain, Italy, and the rest of Europe), Asia-Pacific (China, Japan, India, South Korea, and rest of Asia-Pacific), and LAMEA (Brazil, South Africa, Saudi Arabia, and rest of LAMEA).
