Rising Dementia Propels Market Growth

The rising cases of dementia are a significant factor contributing to the growth of the portable magnetic resonance imaging market. Dementia, characterized by a decline in cognitive function, affects memory, thinking, behavior, and daily activities. The increase in dementia

cases is largely due to aging populations globally and improved diagnostic capabilities. Portable MRI provides on-site brain imaging, aiding in the diagnosis and monitoring of dementia in various settings, including clinics and care facilities. According to the Australian Institute of Health and Welfare, around 411,100 Australians had dementia in 2023, and this number is expected to more than double by 2058, highlighting the growing need for portable MRI solutions.
