

Difference between Wilkins 375XL and 375

We get the questions many times on the difference between Wilkins 375 and Wilkins 375XL

DENVER, NORTH CAROLINA, UNITED STATES, September 1, 2024

/EINPresswire.com/ -- [Backflow](#)

prevention is an essential aspect of maintaining a safe and clean water supply. As a leading provider of [backflow prevention](#) products, Backflow Parts and More often receives inquiries about the difference between the [Wilkins 375XL](#) and Wilkins 375 backflow models. To address this common question, we are pleased to provide a comprehensive explanation of the key distinctions between these two models.

The main difference between the Wilkins 375XL and Wilkins 375 backflow models is the material used in their construction. The Wilkins 375XL is made with lead-free materials, making it compliant with the Safe Drinking Water Act. On the other hand, the Wilkins 375 is made with leaded materials, which may not be suitable for certain applications. This makes the Wilkins 375XL the preferred choice for those looking for a more environmentally friendly and safer option.

Another noticeable difference between the two models is the color of their ball valve handles. The Wilkins 375XL has green ball valve handles, while the Wilkins 375 has blue ball valve handles. This color-coding system makes it easier for users to identify which model they are working with, ensuring proper installation and maintenance.

Backflow Parts and More

Wilkins 375XL Backflow Device
