Definition:

A company that gathers, aggregates, and markets data about a person or entity to other businesses or entities is known as a data broker. Large volumes of data are gathered and compiled by a data broker from a range of sources, including public records, online activity,

social media, surveys, and more. This information is arranged and compiled by a data broker into insights that may be utilized for marketing targeting, risk assessment, and identity verification. These services cover data privacy, data monetization, data collection, and data analysis. Because it makes it easier for data brokers and data subjects to exchange valuable data, it is crucial to the data economy.

**Power Generation:** Fossil fuel power plants, particularly those that are expected to operate for several decades, represent a significant opportunity for retrofitting with carbon capture technology.

**Market Trends:**

N
