Growth Driver Of The Male Hypogonadism Market

The increase in infertility rates is expected to propel the growth of the male hypogonadism market going forward. Infertility refers to a condition affecting the male or female reproductive system that is characterized by the inability to conceive after 12 months or longer of frequent, unprotected sexual activity. Male hypogonadism, which can lead to decreased sperm production and infertility, is one of the potential causes of male infertility. As a result, the increasing

prevalence of male infertility is expected to drive the growth of the male hypogonadism market.
