Growth Driver Of The Ruminant Feed Antibiotics Market

Rising demand for dairy products is expected to propel the growth of the ruminant feed antibiotics market going forward. Dairy products are milk and any of the foods made from milk, such as butter, cheese, ice cream, yogurt and condensed and dried milk. Antibiotics in ruminant

feed can improve animal performance, as antibiotics allow farmers to produce more milk with less feed input. Ruminant feed antibiotics are used to promote milk production in dairy cows. Some antibiotics cause the rumen bacteria colony (one of four stomachs in ruminant cattle) to produce more of the compounds required by cattle for growth.
