Growth Driver Of The Chronic Hepatitis B Market

The high prevalence of chronic hepatitis B infection is expected to propel the growth of the chronic hepatitis B virus market going forward. Hepatitis B is a liver infection brought on by the hepatitis B virus (HBV), which is prevented through vaccination. The increase in hepatitis B infection rates is due to a combination of factors, particularly in low- and middle-income countries, due to low vaccination coverage leading to higher transmission rates as large portions of the population remain unprotected. Rising hepatitis B infection rates can increase demand for diagnostic tests and treatment options.
