

# UK Veincentre Releases New Expert Article to Explain the Differences Between “Invasive,” “Non-Invasive,” and “Minimally-Invasive” Medical Procedures

Dubai, United Arab Emirates – UK Veincentre Dubai clinic releases a new article in which the expert consultants from the UK explain the differences between “invasive,” “non-invasive,” and “minimally-invasive” medical procedures. According to the doctors at this prestigious UK Veincentre in Dubai, these distinctions are important because they impact both the effectiveness of medical treatment and the patient’s treatment experience.

According to Dr. Mark Regi, widely considered one of the best vein doctors in Dubai, “One of the most important benefits of non-invasive diagnostic methods and minimally-invasive treatment techniques is that they can be performed in the comfort of our offices. Vascular Surgery and varicose veins treatment that used to require hospitalization and lost time away from work can now be treated in under an hour, after which you walk out and return to your normal activities.” The UK Veincentre specialists in Dubai want their patients and the general public to understand the advances that have been made in the treatment of vein disease, and how fast, easy, and painless modern treatment methods are. The doctors at UK Veincentre believe that if the public becomes more aware of the non-invasive and minimally-invasive ways that vein disease is treated today, they will be more likely to seek treatment and feel empowered to visit their Central Clinic Location and professional vascular surgeon Dubai today to receive industry-leading treatment and Upfront, Fixed Prices.

## Varicose Vein Treatment Options

Varicose veins and spider veins are both common problems among adults in the UAE. They affect over 3 million people of both sexes, although women are more likely to experience them than men. Varicose veins are the larger of the two issues, appearing as twisted, bluish veins raised above the skin. Spider veins are smaller and take on a web-like appearance.

Safe and effective vein treatments are available for both spider and varicose veins with UK Veincentre’s unique Walk In, Walk Out Service and specialist Women-Only Days for Comfort and Privacy. These vascular surgery treatments include endovenous laser ablation (EVLA), sclerotherapy, and microphlebectomy. All of these procedures have the benefit of being minimally invasive, allowing them to be performed on an outpatient basis in the doctor’s office. These treatments help to restore both the beauty and the health of the legs while minimising downtime and discomfort.

## Vein Disease Treatment for Everyone

UK Veincentre discusses the things that patients and the general public should know about vein

disease, in the form of a vein disease that can affect anyone. According to these varicose vein doctors in Dubai, many people want to learn more about varicose veins treatment Dubai or how to improve their overall vein health, but they are put off by the often challenging scientific language used to describe vein disease and how it is treated.

According to Dr. Wissam Al Jundi, medical director of UK Veincentre in Dubai, "to understand the need for vein disease treatment, you have to understand that it really IS a disease. Varicose veins aren't just unattractive – they are impairing your circulation and endangering your overall health. And other vein diseases like deep vein thrombosis (DVT) are so serious that they can even be fatal." In this article, Dr. Wissam explains in simple language what exactly vein disease is, how it is diagnosed and treated, and how important it is to seek treatment.

The vein specialists in Dubai hope that their article reaches a wide audience among the general public and helps them to realise the benefits they can realise by seeking treatment for their vein health. Anyone interested in learning more about these issues is invited to visit the clinic's website at: [www.uk-veincentre.com/](http://www.uk-veincentre.com/).
