**Increasing adoption of biologics:** Biologics, often used to treat autoimmune diseases and other chronic conditions, are commonly administered via autoinjectors. As biologics become more popular, the need for autoinjectors has increased.

**Growing Preference for Self-Administration:** Patients are becoming more interested in devices that allow for at-home drug administration, reducing the need for frequent doctor visits. This convenience enhances patient compliance and reduces healthcare costs.

**Technological Advancements:** Innovations in autoinjector design, such as improved safety features (e.g., needle retraction), customizable dosing, and user-friendly devices, are driving their adoption.

**Aging Population:** The growing elderly population, which is more prone to chronic diseases, further drives the demand for easy-to-use drug delivery systems like autoinjectors.

**Rising Incidences of Anaphylaxis:** The increasing number of allergies and the risk of life-threatening reactions have led to a higher demand for emergency autoinjectors, particularly for epinephrine.
