

Stationary Fuel Cell Market Expected to Targets \$9 billion by 2031

Global Stationary Fuel Cell Market
Projected to grow at 13.1% CAGR To 2031

WILMINGTON, DE, UNITED STATES,
September 9, 2024 /EINPresswire.com/
--

According to a new report published by Allied Market Research, The [stationary fuel cell market](#) size was valued at \$2.6 billion in 2021, and stationary fuel cell industry is estimated to reach \$9.0 billion by 2031, growing at a CAGR of 13.1% from 2022 to 2031.

Key players in the stationary fuel cell industry Ballard Power Systems, Posco Energy, Toshiba Fuel Cell Power System Corporation, Denso Corporation, Mitsubishi Hitachi power systems Ltd., FUJI Electric Co. Ltd., Fuelcell Energy Inc., Plug Power Inc., Horizon Fuel Cell Technologies Pte, and Aisin Seiki Co., Ltd.

Stringent government regulations to control increasing pollution and increase in demand for distributed power system are the key factors boosting the Stationary fuel cell market growth."

Asia-Pacific accounted for the largest market share in the market and is projected to grow at a CAGR of 13.5% during the forecast period. An increase in the investment of the government and private industries towards the hydrogen

infrastructure has benefited the global stationary fuel cell market opportunities.

Rapid development and increased power consumption need the optimal use of energy resources. This has expanded the use of low-emission energy sources like [fuel cells](#). Emerging fuel cell technologies are being employed in green energy generation as well as backup power

systems such as Uninterrupted Power Supply (UPS) and portable charging devices.

The electricity was generated using renewable resources and a combustion engine. However, these devices were unreliable because they were dependent on numerous natural and other circumstances.

Stationary fuel cell devices were designed to remove the risk of grid reliance and boost power availability. These systems provide reliable power backup and take up little space while delivering optimum efficiency.

The stationary fuel cells market enables cleaner, adaptable, and innovative power solutions to the present scenario. These cells are very operative in terms of their utilization in electrical applications and power generation.

The use of stationary fuel cell systems for backup power, distributed power production, cogeneration, and power delivery at remote places has grown dramatically in recent years.

The stationary fuel cell is a system generating power through an electrochemical reaction. It can be used as a source for primary applications, a backup source, or an electrical source in critical operations, and stationary fuel cells to reduce oil and other harmful emissions and support an eco-friendly environment.

A considerable number of industrial and commercial sectors are implementing these power systems to provide continuous power availability for equipment that cannot function without electricity.

In order to generate electrical power, stationary fuel cell devices have evolved as an effective and dependable alternative to combustion heat engines.

As per [stationary fuel cell market analysis](#), on the basis of capacity, the 5KW to 250 KW segment emerged as the global leader by acquiring more than 40% of the stationary fuel cell market share in 2021, and is anticipated to continue this trend during the forecast period.

On the basis of type, the proton exchange membrane fuel cell segment accounted for more than half of the global market share in FY2021.

On the basis of application, the prime power segment accounted for nearly half of the global stationary fuel cell market share in FY2021.

On the basis of end-use industry, the transportation segment accounted for more than one-third of the global market share in FY2021.

Impact of covid- on the stationary fuel cell market

COVID-19 has influenced the stationary fuel cell sector and has had an impact on economic growth in several regions. Lockdowns and curfews have caused various manufacturing processes to be halted, forcing fuel prices to skyrocket.

Additionally, rise in customer knowledge about the need to cut GHG emissions and improve air quality will boost market demand.

About Us

Allied Market Research (AMR) is a full-service market research and business-consulting wing of Allied Analytics LLP based in Portland, Oregon. Allied Market Research provides global enterprises as well as medium and small businesses with unmatched quality of "Market Research Reports" and "Business Intelligence Solutions." AMR has a targeted view to provide business insights and consulting to assist its clients to make strategic business decisions and achieve sustainable growth in their respective market domain.

Pawan Kumar, the CEO of Allied Market Research, is leading the organization toward providing high-quality data and insights. We are in professional corporate relations with various companies and this helps us in digging out market data that helps us generate accurate research data tables and confirms utmost accuracy in our market forecasting. Each and every data presented in the reports published by us is extracted through primary interviews with top officials from leading companies of domain concerned. Our secondary data procurement methodology includes deep online and offline research and discussion with knowledgeable professionals and analysts in the industry.
