

Aisles Introduces Athena II: The Next Era of AI-Driven Cybersecurity

PORTLAND, OR, UNITED STATES,
September 10, 2024 /

EINPresswire.com/ -- [Aisles](#), a leader in artificial intelligence innovation, has unveiled Athena II, the latest iteration of its HELPS AI antivirus software. This new release introduces advanced capabilities that push the limits of digital protection, offering robust features that elevate the standards of cybersecurity.

Advanced Threat Detection

Athena II represents a leap forward in threat detection. Unlike earlier versions, which focused primarily on scanning basic files, Athena II expands its capabilities to a wide range of file types, including images, videos, and complex documents. By scanning these diverse formats, Athena II ensures that no threat remains hidden, providing users with comprehensive protection.

Real-Time Lockdown

The defining feature of Athena II is its real-time threat lockdown, which takes immediate action the moment a threat is identified. By freezing all activity and isolating the potential danger, Athena II prevents malware from spreading across the device. This rapid response is crucial for safeguarding personal and business data, ensuring no time is wasted in containing the threat.

Introducing SandTrap

Athena II's standout feature, SandTrap, introduces an innovative approach to malware defense. SandTrap creates a virtual copy of the user's system, tricking malware into entering this secure

environment. While the malware operates in this decoy, SandTrap analyzes its behavior and neutralizes it, all without affecting the real system. This proactive defense ensures that users are protected from immediate harm while enhancing Athena II's defenses for future attacks.

Comprehensive Coverage

Athena II's scanning capabilities have also expanded to cover a broader array of file formats, from PDFs to multimedia files. This ensures that users remain fully protected, regardless of the file type or source of the threat.

A New Standard for Cybersecurity

With Athena II, Aisles continues to lead the way in AI-driven cybersecurity. Its combination of features, including SandTrap and real-time lockdown, positions Athena II as a forward-thinking solution for today's evolving cyber threats.
