## Key Trends

**Growing Cardiovascular Disease Prevalence:** The increasing incidence of cardiovascular diseases, particularly acute coronary syndrome (ACS) and stroke, is driving the demand for P2Y12 inhibitors in the U.S. These drugs, including clopidogrel, prasugrel, and ticagrelor, are widely

used to prevent thrombosis in patients undergoing percutaneous coronary intervention (PCI).

**Shift Toward Newer Agents:** There is a gradual shift from older P2Y12 inhibitors like clopidogrel to newer, more potent alternatives such as ticagrelor and prasugrel. These newer agents offer faster and more consistent platelet inhibition, leading to better clinical outcomes for high-risk patients.

**Rising Adoption of Generic Versions:** The patent expirations of major P2Y12 inhibitors, including clopidogrel and prasugrel, have led to a rise in generic versions, making these drugs more accessible and affordable. This is expected to increase their use in lower-cost healthcare settings.

**Personalized Medicine and Genotyping:** Advancements in personalized medicine, particularly genetic testing for CYP2C19 variants, are influencing prescribing practices. Patients with poor metabolism of clopidogrel are often switched to alternative P2Y12 inhibitors like ticagrelor or prasugrel to improve treatment efficacy.
