Growth Driver Of The Wireless Display Market

The increased usage of consumer products such as smartphones, tablets, computers, and smart TVs across the globe is contributing to the growth of the market. The wireless display is a kind of technology that enables the display of content from a phone or a computer on a TV or projector without a video cable. Globally there has been an increasing demand for consumer products such as smartphones and others owing to several benefits offered, including increased

connectivity, and remote functioning, among others. Thus, an increase in the usage of smartphones, tablets, computers, and smart TVs will be an increase in demand for the display of content on big screens supporting the growth of the market.
