The global Single Malt Whiskey Market Size is estimated to register 4.9% growth over the forecast period from 2023 to 2030.

Definition:

Single-malt whiskey is made exclusively at one distillery. Malting, mashing, fermentation,

distillation, mashing, maturation, chill filtration, and other processes are involved in its manufacturing. High prices and a shortage of raw materials are barriers to expansion for the single malt whiskey industry, which is primarily driven by growing disposable incomes and the impact of social media. However, the industry is expected to continue growing due to the significant prospects presented by entering new markets and developing innovative manufacturing and aging strategies.
