## Growth Driver Of The Biosurgery Market

The increase in the prevalence of chronic disease is expected to propel the growth of the biosurgery market going forward. Chronic disease refers to health problems that persist for a year or longer and necessitate continuing medical care, restricting everyday activities, or both. The main causes of death and disability in the US are chronic diseases such as diabetes, cancer, and heart disease. Biosurgery is used to eliminate dead tissue, lower the risk of infection, and speed up the healing process for chronic wounds.
