

Advocating for Veteran Talent in Tech: Dominic Tria's Path

Veterans in tech bring discipline, adaptability, and strategic thinking. Dominic Tria exemplifies how military skills enhance data center operations.

ATLANTA, GA, UNITED STATES, October 1, 2024

[/EINPresswire.com/](https://EINPresswire.com/) -- With the technology sector evolving rapidly, the need for disciplined, adaptable, and innovative professionals has never been greater. [Dominic Tria](#), a Datacenter Operations Manager and U.S. Navy veteran, is a prime example of how military experience can enhance the tech industry's capabilities. Tria's career seamlessly blends his military background, technical expertise, and commitment to sustainability, making him a powerful advocate for hiring veterans in tech.

Dominic Tria

According to a 2023 report by LinkedIn, veterans are 160% more likely to have advanced technical skills than non-veterans, making them invaluable assets in industries like data management and cybersecurity. Tria's journey from the Navy to the tech world underscores this, as he transitioned seamlessly into managing complex IT infrastructures, drawing on skills such as leadership, strategic planning, and problem-solving.

“

By investing in veterans, employers not only gain skilled and dedicated employees but also support the successful reintegration of veterans into the workforce”

Dominic Tria

"The military instilled in me a mindset of resilience and teamwork," says Dominic. "In the Navy, mission success depends on the collective effort of the team, and there's a strong emphasis on leadership at all levels. These qualities have been invaluable in the fast-paced world of data center management."

During his service, Dominic held roles such as Communications/Cyber Officer and Datacenter Manager,

where he led multi-service teams to ensure high system uptime and secure data management across various deployments. This experience honed his ability to remain calm under pressure, a skill he believes is crucial in tech. Tria states, "When managing a critical data migration project, we faced unexpected system failures. My military training enabled me to stay composed, lead

my team efficiently, and resolve the issue, ensuring uninterrupted service for our clients."

The U.S. Department of Labor reports that over 200,000 veterans transition to civilian life annually, many with skills directly transferable to the tech industry. Tria emphasizes the value of hiring veterans, noting, "Military personnel are trained to be disciplined, reliable, and mission-focused. We're used to adapting to new technologies quickly, which is essential in a rapidly changing industry like tech."

As technology continues to advance, integrating veterans' unique skill sets can drive innovation. Tria advocates for companies to create training programs that help veterans transition into civilian roles. "By investing in veterans, employers not only gain skilled and dedicated employees but also support the successful reintegration of veterans into the workforce," he explains.

Beyond technical expertise, Dominic's experience also highlights the potential for veterans to lead in sustainability efforts within the tech sector. The International Energy Agency estimates that data centers accounted for about 1% of global electricity use in 2022, a figure set to increase. Dominic, who actively incorporates green technologies into his work, believes veterans can help guide the industry toward more sustainable practices.

"Veterans are trained to think strategically and consider long-term impacts," Tria notes. "This mindset is crucial when developing sustainable solutions in data center operations, helping reduce environmental impact while maintaining efficiency."

As the tech industry seeks to build a more sustainable and innovative future, Dominic Tria's career serves as a testament to the valuable contributions veterans can make. His journey from the Navy to the forefront of data center management underscores the significant benefits of hiring veterans, not just for their technical skills but for the leadership, adaptability, and strategic thinking they bring to the table.
