[Growth Driver Of The Web Application Firewall Market](#)

The increase in the number of cyberattacks and data breach activities is expected to propel the web application firewall market going forward. A cyberattack or data breach is a malicious and intentional attempt by an individual or a group to breach the information system of another person or organization. It is used to gain unauthorized access, corrupt, disrupt, disable, and control someone's computer. A web application firewall prevents and protects the web

application from cyberattacks and keeps the data safe.
