Growth Driver of The Non-Alcoholic Steatohepatitis Treatment Market

The Business
Research Company

The Business Research Company

The increasing cases of obesity are expected to boost the growth of the non-alcoholic steatohepatitis treatment market going forward. Obesity refers to a medical condition characterized by the excessive accumulation of body fat, often resulting in an individual having a body mass index (BMI) of 30 or higher, and is associated with various health risks and complications. The increasing prevalence of obesity worldwide has led to a rise in the incidence of NASH, making it potentially the most common cause of advanced liver disease.
