

Arhasi Partners with GenerixCare to Revolutionize Adult Social Care with AI-Powered Schedule Management

This innovative collaboration aims to enhance care quality and improve patient outcomes in geriatric healthcare.

FRISCO, TX, UNITED STATES, October 8, 2024 /EINPresswire.com/ -- In a groundbreaking move, Arhasi, a leader in AI-driven technology solutions and Gateways, and GenerixCare, a pioneer

in UK's geriatric healthcare services, unveils a revolutionary solution for optimizing the availability of care for elderly patients. As a result of a strategic partnership, this solution aims to transform geriatric care through the power of artificial intelligence. The collaboration leverages all-new enhancements of Arhasi's proprietary AI Agentic Gateway platform, R.A.P.I.D., to tailor patient-carer synergies designed to enhance the quality of care for patients as well as streamline the operational efficiency of carers. This novel feature, Arhasi's Hexasphere AI, is a geospatial intelligence agent that builds upon the current market's location technology to better connect patients to the right carers.

The AI-powered solution intelligently analyzes patient profiles, care requirements, and carer competencies to ensure that elderly patients are paired with caregivers who best meet their physical, emotional, and social needs. The partnership represents an important stride forward in personalized care for seniors, providing an innovative and next-gen approach towards addressing the complex and diverse needs of a growing aging population.

Key Features of the AI-Powered Patient-Carer Matching System:

Personalized Matching: The system utilizes Arhasi's new geospatial offering, Hexasphere AI, to locate closest carers and provide recommendations based on detailed carer profiles including service history, satisfaction scores, and compatibility

Enhanced Patient Outcomes: By improving the compatibility between carers and patients, the solution helps to improve overall satisfaction, reduce hospital readmissions, and promote better long-term health outcomes

Carer Retention: The technology also supports healthcare companies by reducing caregiver burnout through improved job satisfaction, as carers are matched with patients whose needs align with their skills and personal approach to care

Chiru Bhavansikar, CAIO of Arhasi, shared: "Our mission is to leverage AI to create meaningful solutions that tangibly improve people's lives. Through our work with GenerixCare, we are addressing critical needs in elder care, ensuring that patients are aligned to receive the best possible care from professionals who can understand and respond to their unique needs. This is the future of personalized care."

Olufemi Akinyemi, Managing Director of Generixcare, shared: "At GenerixCare, we are dedicated to providing exceptional, people-centered care to our service users. We are thrilled to partner with Arhasi to leverage cutting-edge AI technology to optimize our client-carer matching process. This innovative solution will allow us to provide a more personalized and enriching care experience for our service users, while also improving job satisfaction for our dedicated caregivers. We believe this partnership represents a significant step forward in the future of adult health and care.

The partnership between Arhasi and GenerixCare comes at a time when the global aging population is on the rise, with the number of people aged 60 and older expected to double by 2050. As the demand for high-quality elder care increases, innovative solutions like this AI-driven matching system are crucial for seniors to receive the attention, care, and companionship they need to thrive.
