All age groups are susceptible to sleep apnea, a disorder that is frequently underdiagnosed. A study found that the most prevalent cause of adult sleep apnea is obesity and excess weight. Additionally, the fast rising prevalence of sleep apnea is mostly due to risk factors associated with modern lifestyles, such as alcohol consumption, smoking, lack of physical activity, and psychological stress. Medical professionals are therefore putting a lot of effort into creating safe, effective, and adaptable sleep apnea diagnosis and treatment methods. Sleep apnea is currently being treated using a number of therapeutic devices. The market for sleep apnea devices is growing as a result of the increased prevalence of sleep apnea and continuous research and development efforts to create sophisticated obstructive sleep apnea medical devices.
