## Growth Driver Of The Continuous Renal Replacement Therapy Machine Market

The continuous renal replacement therapy machine market is expected to grow in response to the rising prevalence of acute kidney injury (AKI). AKI is characterized by a sudden decline in kidney function, hindering the body's ability to filter waste and maintain fluid and electrolyte balance. Factors contributing to AKI include decreased blood flow to the kidneys, damage from toxins or infections, and urinary tract obstructions. Continuous renal replacement therapy machines provide gentle and continuous dialysis, gradually removing waste products and excess fluids from the blood, stabilizing the patient's condition, and preventing further complications.
