

alt.ai plans strategic collaboration with INTLOOP to create HR/consulting business using digital clones

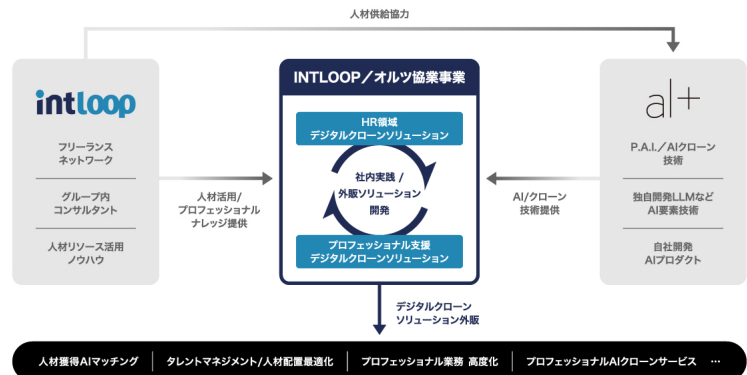

Developing new HR/consulting solutions through the fusion of professional talent and AI clone technology

TOKYO, JAPAN, October 14, 2024 /EINPresswire.com/ -- alt Inc. (<https://alt.ai/en/>), the Japan-based developer and distributor of Personal Artificial Intelligence (P.A.I.®) and AI clone technology (head office: Minato-ku, Tokyo; CEO: Kazutaka Yonekura), is pleased to announce a partnership with INTLOOP Inc. (head office: Minato-ku, Tokyo; CEO: Hirofumi Hayashi), a consulting business that leverages a network of over 40,000 freelancers, with the aim of creating HR/consulting solutions that utilize AI cloning technology.

In today's business environment, it is becoming increasingly important to secure human resources with advanced specialized knowledge and skills. However, the labor market itself has changed dramatically, and there is a shortage of talented personnel, so companies are spending significant amounts of time and money to secure talent. In particular, as digitalization and digital transformation progress across society, the shortage of personnel with IT skills continues to grow, and new solutions are needed to meet this demand.

alt.ai plans strategic collaboration with INTLOOP to create HR/consulting business using digital clones. Developing new HR/consulting solutions through the fusion of professional talent and AI clone technology

Partnership collaboration model image_INTLOOP and alt

To solve this problem, alt and INTLOOP aim to develop and provide next-generation HR and consulting solutions that utilize generative AI and AI cloning technology.

□ Activities under the new partnership

1. Creating solutions for generative AI and digital clones in the HR field

We will work to create new solutions by utilizing generative AI and digital clones to optimize resource utilization in organizational leadership, HR acquisition, and staff allocation.

2. Creating professional support solutions using digital clones

We will strengthen our provision of digital services in advanced white-collar work areas. We will also create clones of our consultants and engineers and work to create new businesses and services.

3. Strengthening HR development systems to meet demand for generative AI and digital clones

We will strengthen our system to respond to the demand for generative AI and digital clone solutions. We will also efficiently secure consultants and engineers with advanced specialized knowledge, primarily from INTLOOP's more than 40,000 employees, and promote the construction and development of a solid resource base to respond to AI demand.

4. Strengthening and accelerating joint business with a view to forming joint ventures

Finally, the two companies are considering forming a new joint venture to strengthen the provision of digital services in the HR field. In addition to the use cases and services mentioned above, we are also considering creating new services by generating digital clones of consultants and engineers, building a system for developing and delivering next-generation solutions and accelerating business creation.

Through the use of generative AI and Personal Artificial Intelligence (digital clones) in the HR and advanced white-collar work fields, alt and INTLOOP will contribute to improving the productivity of companies, human resources, and society as a whole.

□ Future prospects

alt has set a goal of replacing the labor of 50 million people with AI cloning by 2030, and is working to provide a number of AI solutions to solve social issues and boost labor productivity with AI.

The value of the data itself and the know-how for utilizing data that alt and INTLOOP have accumulated are essential assets for Japanese companies and individuals to demonstrate their unique value. By collecting, organizing, and structuring the data for use with DX and AI technology, we will provision AI clones that work alongside and support employees, promote their many uses across Japan, and continue to realize HR services that fully utilize P.A.I.—which

will both circulate the clones' activities and realize the DX and AI transformation of companies.

Furthermore, we look forward to developing solutions in the HR and professional support fields by combining alt's AI cloning technology with INTLOOP's freelance network and the knowledge of highly skilled human resources, mainly consultants. In addition to creating new use cases, we will help resolve various business and operational issues arising as a result of the declining workforce.
