Definition:
Software programs called text annotation tools are used to annotate digital text data with labels, comments, and other metadata. With the use of these tools, users can recognize and annotate particular text elements—like names, locations, dates, or events—for a variety of applications, such as information retrieval, machine learning, sentiment analysis, and natural language processing. Text classification, entity recognition, sentiment analysis, and keyword extraction are just a few of the functions that text annotation tools may offer. These techniques are useful for analyzing and deriving insights from massive amounts of unstructured text data in a variety of industries, such as healthcare, banking, e-commerce, and social media. The two main factors propelling the text annotation tool market's expansion are the rising need for AI-based text analytics solutions and the expanding accessibility of big data.
