Growth Driver Of The Digital Intelligence Platform Market

The increase in demand for mobile applications is significantly contributing to the growth of the digital intelligence platform market. A mobile application, more commonly known as an app is a category of software application created specifically to run on mobile devices like smartphones and tablets. Smartphone users download and rely on more mobile applications and every use case is getting a dedicated application for making it easier for mobile users to access that service. Digital intelligence platforms make use of user data generated from mobile phone apps to come up with useful insights for businesses on user engagement, customer preferences, and new trends.
