## Market Trends

Increasing Demand from the Paints and Coatings Industry

- Insoluble particle elements called pigments provide paints and coatings their color, opacity, gloss control, rheological control, and a few additional qualities including corrosion inhibition.
- Pigments are regarded as a crucial component of paints and coatings because they add color

and serve as a volume filler, which lowers coating costs.

- The Sherwin-Williams Company, PPG Industries, AkzoNobel N.V., Nippon Paint, and RPM International were the top 5 paint and coatings businesses in terms of revenue in 2022, according to the World Paint and Coatings Industry Association (WPCIA).
- The production of paints, varnishes, and similar coatings, printing ink, and mastics in Germany is expected to generate approximately USD 12.94 billion in revenue by 2024, according to the Statistisches Bundesamt. This is likely to lead to a rise in the use of pigments in the paints and coatings industry.
- In addition, The Sherwin-Williams Company started building an addition to its current manufacturing site in Statesville, North Carolina, with a ceremonial groundbreaking in November 2022. The goal of this development is to greatly increase the company's yearly production capacity for its architectural paint and coating products. Since it is anticipated to be completed by the end of 2024, there will be a greater need for pigments for paints and coatings.
- All the above factors are expected to impact market growth in the coming years significantly.
