percentage or number of people who are aged 65 and older in comparison to the total population. Active wound care plays a crucial role in addressing the healthcare needs of the aging population by providing advanced solutions for the management of chronic wounds. As individuals age, the prevalence of conditions such as diabetic ulcers, pressure ulcers, and venous leg ulcers tends to increase. Active wound care technologies, including innovative dressings, regenerative therapies, and bioactive materials, offer efficient and tailored approaches to wound healing in elderly individuals. These solutions not only accelerate the healing process but also contribute to minimizing complications associated with chronic wounds, enhancing the overall quality of life for the aging demographic.
