The global corrugated packaging market is expected to grow at 4% CAGR from 2024 to 2032. It is expected to reach above USD 88.25 billion by 2032 from USD 62 billion in 2024.

Usually composed of paperboard, corrugated packaging

works well for a wide range of goods, including food, medications, equipment, and more. Sheets of heavy-duty layered paper are folded, cut, and shaped to create corrugated packaging, which can be used to make milk cartons, juice boxes, cardboard boxes, and food packing boxes, among other items. Because it is stronger and thicker, corrugated cardboard is frequently used to make

furniture and shipping boxes. A component of the recycling sector, corrugated box packaging is made of compressed and shredded recycled cardboard, paper, sawdust, and paper waste.
