Cystic Fibrosis Market

Cystic Fibrosis (CF) is a genetic disorder that primarily affects the lungs and digestive system. It is caused by mutations in the CFTR gene, which leads to the production of thick and sticky mucus. This mucus can obstruct airways and lead to respiratory infections, as well as affect the pancreas, hindering digestion and nutrient absorption. Symptoms of CF include chronic cough, lung infections, difficulty breathing, and digestive issues. While there is no cure, advancements in treatment have significantly improved the quality of life and life expectancy for individuals with CF.
