The global controlled release drug delivery market size is expected to grow at 7.8% CAGR from 2024 to 2032. It is expected to reach above USD 78.41 billion by 2032 from USD 39.88 billion in 2024. Over the course of the forecast period, the market is anticipated to grow as a result of

changing prescription patterns and doctors' preference for controlled release drug delivery over traditional systems due to advantages like improved patient compliance, lower treatment costs,

and high therapeutic efficacy. Furthermore, because the pharmaceutical industry is extremely fragmented and competitive, pharmaceutical companies are proactive in responding to shifting market demands and consistently investing in the development of controlled release drug delivery systems, which greatly increases demand.
