To know about the Research Methodology :

Tamoxifen Citrate Market Segment Analysis:

One medication used to treat breast cancer in both men and women is tamoxifen citrate. In women who have experienced ductal carcinoma in situ (abnormal cells in the breast ducts) or who are at high risk of developing it, it is also used to prevent breast cancer. Additionally, it is undergoing testing to treat various types of cancer. By preventing the effects of the hormone estrogen in breast tissue, tamoxifen citrate stops the proliferation of breast cancer cells. The active ingredient tamoxifen is found in tamoxifen citrate.

In tumors that overexpress protein kinase C (PKC), such malignant glioma and other cancers, tamoxifen also slows signal transmission and has an antiproliferative effect. Ageing also seems to be accelerated by some cancer treatments. These drugs include hormone therapy, steroids, and targeted cancer treatments. Cataracts have been connected to the hormone drug tamoxifen, which is used to treat breast cancer.
