High-Efficiency Particulate Air (HEPA) filters, primarily composed of submicron glass fibers, represent a category of extended surface mechanical filters with a texture resembling blotter paper. These filters boast a substantial surface area, facilitating the removal of approximately 99.7% of particles equal to or larger than 0.3 microns. Noteworthy is their efficiency in filtering particles of varying sizes, making them highly effective in enhancing air quality.

In January 2024, COWAY CO., LTD. launched Airmega 100. It has a 360° air intake and a 3-stage HEPA filtration system that effectively removes harmful pollutants and purifies the air within an 810-square-foot space every hour. The product has a real-time air quality indicator, energy-saving technology, auto mode, and a precise particle sensor, which are some of the important features of this new air purifier.

In February 2023, the company introduced a new carbon air purifier that uses UV technology to promote healthy indoor air quality. This system helps eliminate unwanted odors, gases, and volatile organic compounds from the air inside the home. Additionally, the technology reduces the growth of microorganisms, such as viruses and bacteria, on the evaporator coil.

Geographically segmented into several key regions:

Geographically, this report is segmented into several key regions, with sales, revenue, market share and growth Rate of Air Purifiers in these regions, covering

North America (USA, Canada and Mexico)

Europe (UK, Germany, France and the Rest of Europe)

Asia Pacific (China, Japan, India, and the Rest of the Asia Pacific region)

South America (Brazil, Argentina and the Rest of South America)

Middle East and Africa (GCC and Rest of the Middle East and Africa)

The air purifier market in the U.S. held over 72.0% share of the North America market.

The U.S. Department of Energy has established standards for quality assurance and specifications related to HEPA filters. Similarly, the Association of Home Appliance Manufacturers (AHAM) has established the Clean Air Delivery Rate (CADR), which is a standard used to measure the effectiveness of air purifiers, thereby enabling consumers to compare the performance of air purifiers in eliminating dust, pollen, and tobacco smoke.

Asia Pacific dominated the market and accounted for 38.9% of the global revenue share in 2023,

due to several variables, including a larger population with more disposable income, rapid urbanization, and industrialization. For instance, in recent years, the Association of Southeast Asian Nations (ASEAN) has made rapid progress in raising the Occupational Safety and Health (OSH) standards within Southeast Asia. The efforts of the OSHNET, the platform to drive collaboration among regional OSH centers and agencies, have been important in the region. Mandated policies by agencies for employers to maintain worker safety in industries and commercial places are expected to drive the demand for air purifiers in Southeast Asia.
