Benchmark Analytics® Launches First Sign® Officer Advocacy Suite

This innovation is the industry's first comprehensive technology solution advocating for officer wellness, support, and success.

CHICAGO, IL, UNITED STATES, October 18, 2024 /EINPresswire.com/ --
[Benchmark Analytics](#)® a SaaS-based, data-driven enterprise analytics platform that enables public safety agencies to help improve the performance and wellness of their workforce while also helping to reduce risk, today announced the launch of [First Sign® Officer Advocacy Suite](#). This industry-first suite of technology solutions is dedicated to helping agencies support and empower officers throughout their policing careers.

First Sign® Officer Advocacy Suite expands beyond Benchmark's highly successful First Sign® Early Intervention, the industry's first and only research-based early intervention system (EIS), to include three brand new solutions. The result is a purpose-built technology suite that uses research-based analytics to proactively address the challenges of working in law enforcement.

"A policing career can take its toll on officers, both professionally and personally, yet very few ask for the support they desperately need," said [Ron Huberman](#), CEO, Benchmark Analytics. "Officers need advocates for healthy, successful careers, and that's where Benchmark comes in. We're doubling down on our mission to transform police force management by helping agencies proactively address officer health and ultimately create stronger, safer communities."

Based on a "whole officer" framework, First Sign® Officer Advocacy Suite includes four AI-powered solutions, each built to address a different challenge within the law enforcement career environment.

First Sign® Early Intervention is the industry's most effective, accurate EIS. With 85% model precision, our unique process enables agencies to identify at-risk behavior for proactive intervention and officer support.

First Sign® Wellness Facilitator uses research supported by over 60 million data points to assess officer patterns agencywide. It then offers personalized recommendations, facilitates

confidential training and support, and reports on wellness progress.

First Sign® Excellence Indicator uses data and analytics to identify agency-leading performance. It provides complete visibility into the community impact of each officer, critical to evaluating performance in public service roles, and enables growth-oriented coaching toward success for all.

First Sign® Retention Monitor aims to reduce the turnover challenge that is impacting 80% of police agencies nationwide. Our proactive approach tracks turnover trends, identifies potential issues and individual officers at risk of leaving, and equips supervisors to take necessary action.

The Benchmark Analytics team will be unveiling the First Sign® Officer Advocacy Suite at booth #1715 during the annual International Association of Chiefs of Police (IACP) Conference in Boston, Oct. 19-22.
