The Cannabaceae family of flowering plants includes the genus Cannabis. Cannabis sativa, cannabis indica, and cannabis ruderalis are its three species. Protein, fiber, and healthy fatty acids like omega-3s and omega-6s are all abundant in cannabis seeds. The seeds have significant levels of gamma-linolenic acid and arginine. These compounds help treat chronic pain, lower the risk of heart disease, and enhance neurological and other problems. These seeds also contain calcium, potassium, vitamin E, Sulphur, phosphorus, magnesium, and zinc among other minerals. Those who can't consume nuts, gluten, lactose, or sugar can eat them because they are high in vitamin E.

The market for cannabis seeds is expanding as a result of the increasing cannabis seeds market demand in both the medical and recreational markets.
