

Comparing Risk in Agricultural Land Investments: Row Crops vs Permanent Crops

CALGARY, ALBERTA, CANADA, October 23, 2024 /EINPresswire.com/ --

Omnigence Asset Management is pleased to release a white paper examining the inherent difference between row crop farmland and permanent crop land from a risk management perspective. Row crop farmland involves planting annual crops, such as grains, while permanent crop land involves perennial crops like fruit trees or grapevines that last for many years.

Omnigence team members act as principals of the GPs of a series of alternative funds focused on finding unique sources of return across a broad spectrum of strategies. These funds include [Veripath Farmland Partners](#) which operates on the conviction that worldwide demand for the agricultural products used for food, feed, and fuel makes farmland a valuable long-term investment

Who is Omnigence Asset Management?

Core members of the Omnigence team have been investing together since 2007 with a track record of generating returns for both institutional and retail investors. We prefer novel and underinvested segments of the alternative universe in which to deploy capital. We seek to access strategies that might otherwise not be on the radar of most investors. Smaller can often be beneficial. Less financialized market segments often exhibit higher returns and better capital deployment prospects due to reduced competition and useful correlation benefits and reduced volatility when compared to more mainstream alternative asset classes.
