Proline, glycine, alanine, glutamic, arginine, and aspartic acids are among the amino acids present in seaweed protein. These amino acids are beneficial for human health. According to research, red seaweeds have a high protein content, green seaweeds have a moderate protein content, and brown seaweeds have a low protein content. Seaweed protein is gaining demand as a more cost-effective and alternative source of protein for human and animal nutrition. The seaweed protein market growth is being aided by an increase in the occurrence of health diseases, increased understanding of healthy eating habits, and an increase in health and fitness awareness. Consumers are more conscious regarding their nutritional consumption, benefits of physical activity, and importance of eating food that suits the body's nutritional needs. These trends are anticipated to boost revenue growth the seaweed protein market size in the upcoming years.

Seaweed protein is mostly used in animal feed due to nutrients included in it such as vitamin A, B1, B2, E, K, and C. Consuming seaweeds such as spirulina and chlorella, contain all of the essential amino acids. Moreover, seaweed ensures that consumer gets full range of amino acids. Seaweed can also act as a good source of omega-3 fats. It is used in the development of aquaculture feed, monogastric cattle feed, ruminant feed, and others. Cattle's overall health and

growth rate is improved as a result of consuming seaweed protein. Development of this market is fuelled by increased livestock industrialization, rising meat consumption, and increased need for nutritious feed.
