Driving Demands:

Commonly observed types of sectional doors are made up of aluminum, steel, PVC, fiberglass, and others. Among these, the steel segment accounted for the highest market share in 2021, owing to its high strength, and durability. The market is analyzed with respect to different applications such as exterior and interior. Out of these, the exterior segment accounted for the highest market share in 2021, owing to its high demand from residential and non-residential users. By end user, it is based on residential and non-residential. The market is mainly driven by the rise in industrialization in developing countries, the increasing number of vehicles in households, and the development of commercial infrastructure throughout the regions. However, the fluctuating cost of raw materials and high investment and maintenance costs constrain the growth of the market.

Analyst Review

The Middle East Africa APAC and South America sectional doors market has witnessed significant growth in the past few years, owing to a surge in the number of industrial, and commercial facilities, along with increasing demand for personal vehicles' parking garages.

The rise in demand for manufactured products across the world, especially in developing countries such as India, and China, has led to an increasing number of manufacturing facilities; thereby, driving the demand for sectional doors for wide gates of these facilities. Warehouses are well known for using sectional doors as these doors can incorporate thermal insulation. Furthermore, sectional doors can also incorporate windows, or can entirely be made with glass, making it a suitable choice for shopfronts, and interior applications. In addition, in developing countries, sectional doors are largely demanded by the industrial and commercial sectors.
