Rising global urbanization and increasing population which are fueling the growth of industries, including food & beverage, pharmaceutical, chemical, textile, petrochemicals, and others

Increasing demand for food products

High adoption of mobile water treatment plants by smaller manufacturing facilities, owing to their ease of transportability, installation, and requirement for less space

Mobile water treatment plants are used to treat water in flood and similar natural calamity-affected areas

Opportunities Rapid growth of water-intensive industries

Restraints Frequent maintenance and costly operation of mobile water treatment equipment

Covid-19 Scenario:

The outbreak of the COVID-19 pandemic had a notable impact on the mobile water treatment market. Various businesses in the mobile water treatment market had to stop their business in countries such as Canada, the U.S., and countries in Europe during the lockdown, thereby directly impacting the sales of companies involved in the mobile water treatment business.

Moreover, the lack of manpower and raw materials constricted the supply of raw materials for manufacturing various types of water treatment equipment.

However, the market has gained traction with the introduction of vaccines and governments relaxing norms for resuming business activities around the world.

The report offers a detailed segmentation of the global mobile water treatment market based on services, application, end user, and region. The report provides an analysis of each segment and

sub-segment with the help of tables and figures. This analysis helps market players, investors, and new entrants in determining the sub-segments to be tapped on to achieve growth in the coming years.

Based on services, the rental segment held the largest share in 2021, accounting for nearly 90% of the global mobile water treatment market, and would rule the roost through 2031. The lease segment, however, is estimated to witness the fastest CAGR of 11.9% during the forecast period.

Based on application, the microfiltration segment held the largest share in 2021, capturing nearly one-fourth of the global mobile water treatment market. However, the others segment would dominate the market in terms of revenue in 2031. On the other hand, the disinfection segment is estimated to witness the fastest CAGR of 13.7% during the forecast period. The report also discusses the ultrafiltration, reverse osmosis, and softening segments.

In terms of end user, the industrial segment captured the largest market share of over 90% of the global mobile water treatment market in 2021, and is expected to lead the trail during the forecast period. The non-industrial segment, on the other hand, is likely to achieve the fastest CAGR of 12.4% through 2031.

Based on region, the market in Europe was the largest in 2021, accounting for two-fifths of the global mobile water treatment market, and is likely to maintain its leadership status during the forecast period. However, the market in Asia-Pacific is expected to manifest the highest CAGR of 12.8% from 2022 to 2031. The other regions analyzed in the study include North America and LAMEA.
