

Xiber Launches 10GB Managed Internet Access Standard For Multi-Family And Commercial Properties

Revolutionizing High-Speed Internet with XGS-PON Technology for Bulk Service Communities.

INDIANAPOLIS, IN, UNITED STATES, January 21, 2025 /EINPresswire.com/ -- Xiber, a leading Midwest internet service provider, has standardized XGS-PON (10 Gigabit Symmetrical Passive

As we expand across the Midwest, our goal remains clear: to provide premium internet services at affordable prices.”

Stephen Hon

Optical Network) technology for all new multi-family and commercial multi-tenant projects. This strategic move solidifies Xiber’s commitment to providing advanced internet solutions at competitive prices.

“In today’s digital landscape, speed and reliability are non-negotiable,” said Stephen Hon, President and CTO at Xiber. “By adopting XGS-PON as our standard, we’re ensuring that every property and business we serve benefits from a

future-proof network with unparalleled capabilities.”

While many providers acknowledge the benefits of XGS-PON, Xiber’s proactive approach involves meticulous network planning to avoid over-subscription. This ensures consistent high-speed connectivity, with symmetrical bandwidth up to 10Gbps—ideal for seamless work, streaming, and communication.

XGS-PON represents the next generation in broadband technology, surpassing GPON networks in speed, reliability, and scalability. Its importance stands out as particularly evident in multi-family and multi-tenant commercial environments, where the demand for uninterrupted, high-bandwidth connections continues to rise.

A recent [National Multifamily Housing Council \(NMHC\)](#) survey found that 86% of respondents consider high-speed internet either very important or essential for their properties.

“As we expand across the Midwest, our goal remains clear: to provide premium internet services at affordable prices,” added Hon. “Our new standard equips customers with the tools they need to thrive in an increasingly connected world.”
