

Texas Laparoscopic Consultants Introduces Revolutionary Spatz3 Balloon Procedure

HOUSTON, TX, UNITED STATES, November 1, 2024 /EINPresswire.com/ -- [Texas Laparoscopic Consultants](#) is excited to announce the launch of the [Spatz3 Intra gastric Balloon](#), an innovative, FDA-approved adjustable balloon designed to help patients manage their health more effectively. This advanced, non-surgical procedure offers a new approach to feeling fuller, eating less, and promoting overall wellness. On average, patients achieve a 15% reduction in body weight with the [Spatz3 Balloon Procedure](#).

“Research indicates that over 70% of adults in the United States are overweight or obese, increasing their risk for chronic conditions such as heart disease, type 2 diabetes, and certain cancers. While this is a concerning statistic, it can certainly be improved with safe and effective solutions,” says Dr. Sherman Yu, Board Certified Surgeon at Texas Laparoscopic Consultants.

Dr. Sherman Yu of Texas Laparoscopic Consultants

What is the Spatz3 Intra gastric Balloon?

The Spatz3 intra gastric balloon is a revolutionary device placed into the stomach via endoscopy, with moderate sedation, in a procedure that typically takes 10-20 minutes. This non-surgical outpatient procedure involves filling the balloon with liquid, which then expands to occupy space in the stomach, leading to a feeling of fullness and reduced appetite.

Unlike other gastric balloons, the Spatz3 balloon is the first adjustable intra gastric balloon available in the United States. Its unique feature allows for volume adjustments—either increasing or decreasing the fluid—based on the patient's progress and comfort, which can further enhance its effectiveness and reduce potential side effects.

Patient Care and Follow-Up

We're making weight loss more accessible, affordable and attainable for even more patients with the Spatz3."

Dr. Sherman Yu

The balloon remains in the stomach for up to 8 months, during which time patients receive comprehensive follow-up care from our expert specialists and nutrition team. This approach ensures that patients make necessary dietary and behavioral changes to maintain their health benefits even after the balloon is removed, leading to successful and sustainable results.

Who is a Good Candidate for Spatz3?

The Spatz3 gastric balloon is ideal for individuals with a BMI of 30 to 40 who have not succeeded with traditional methods and are motivated to adopt a healthier lifestyle. It is also suitable for those not interested in invasive surgeries and who are in good overall health.

Dr. Sherman Yu shares his excitement about the enhanced weight loss outcomes patients can achieve with the Spatz3, thanks to its adjustable design and extended 8-month duration. "We've witnessed firsthand how empowered our patients feel as they regain control over their health and lives. We're making weight loss more accessible, affordable and attainable for even more patients with the Spatz3," he states.
