Vegan Food Global Market Report 2024 - Market Size, Trends, And Global Forecast 2024-2033

The vegan food market has expanded rapidly in recent years. It is expected to grow from \$24.58 billion in 2023 to \$27.8 billion in 2024, reflecting a compound annual growth rate (CAGR) of 13.1%. This growth during the historical period can be attributed to heightened awareness of health and wellness, increasing concerns regarding the environmental effects of animal agriculture, ethical considerations related to animal welfare, rising disposable incomes, the globalization of veganism, and government support.

What Are The Forecasts For The Global [Vegan Food Market](#)

[Size](#) And The Predicted Annual Growth Rates?

The vegan food market is projected to experience rapid growth in the coming years, reaching \$42.86 billion by 2028 at a compound annual growth rate (CAGR) of 11.4%. This growth during the forecast period is expected to be driven by the increasing influence of social media, the prevalence of food allergies, vegan activism and movements, and the expansion of retail offerings.

What Are The Major Factors Driving The Growth Of The Vegan Food Market?

Growing environmental concerns among the population are driving the expansion of the vegan food market. The rearing and breeding of livestock, including pigs, hens, cows, and goats, contribute to the greenhouse effect. Livestock agriculture, particularly with cows, releases greenhouse gases that trap heat in the atmosphere, leading to a rise in overall temperatures. The high demand for animal meat necessitates extensive animal farming practices. Therefore, an increase in the number of consumers opting for vegan food reduces the demand for excessive animal farming, which in turn helps lower greenhouse gas emissions in the environment.
