Definition:

Copper scrap refers to waste copper and copper alloys that can be recycled to produce new

copper products. The market for copper scrap is driven by the growing demand for copper in various applications such as electronics, construction, and automotive industries. As environmental concerns rise, the importance of recycling copper has increased, leading to stricter regulations and incentives for recycling. Copper scrap plays a critical role in reducing the environmental impact of copper mining and production, contributing to a more sustainable approach to resource management. The market is characterized by fluctuations in copper prices, which can impact the profitability of scrap dealers and recyclers. Overall, the copper scrap market is essential for promoting sustainable practices while meeting the global demand for copper.

#### Market Trends:

□Rising prices of copper driving higher collection and recycling rates of copper scrap.

#### Market Drivers:

□Increasing demand for recycled copper due to its critical role in renewable energy technologies and electric vehicles.

#### Market Opportunities:

□Expansion of recycling infrastructure and facilities to enhance collection and processing capabilities.

#### Market Challenges:

□Fluctuating market prices for copper affecting the profitability of recycling operations.

#### Fastest-Growing Region:

Asia-Pacific, Latin America

#### Dominating Region:

North America, Europe

#### Market Leaders & Development Strategies:

□On 15th March 2024, "ICA India has called for enhanced recycling practices in the copper industry and introduced a Copper stock and flow model. This initiative aims to optimize copper recycling and management, promoting sustainability in the sector. By improving recycling processes, ICA India seeks to strengthen the copper supply chain and support a more efficient, eco-friendly use of copper resources."
