

HData and the California Water Association Partner to Make Data Accessible and Apply AI to Water Utility Proceedings

New collaboration will allow water utilities to research, analyze, and make decisions on critical regulatory information, using data, AI, and automation.

BIRMINGHAM, AL, UNITED STATES, November 6, 2024 /EINPresswire.com/ -- The [California Water Association](#) (CWA), a leader for regulated water utilities,

By partnering with HData, our members will be empowered with the tools they need to more efficiently address regulations and rulings that directly impact customers."

Jennifer Capitolo, Executive Director at the CWA

and [HData](#), a company using AI and automation to help the U.S. utility industry file, research, analyze, and make decisions using regulatory data, have partnered to provide a solution that will ease regulatory research and filings for CWA members.

CWA represents 89 investor-owned water utilities, serving over 6 million Californians. This new partnership will help CWA members more effectively track and manage vital regulatory proceedings before the California Public Utilities Commission (CPUC). HData's Software-as-a-Service (SaaS)

platform is designed to streamline this, helping users comb through thousands of dockets in seconds so they can better understand the regulatory actions that have been taken, why specific decisions were made, and what the outcomes were. The HData Platform enables regulatory professionals to move forward in an educated and efficient manner, making decisions that are more likely to meet strategic goals. Through the partnership, CWA members will be granted direct access to the HData Platform, supplying them with every document filed on the California Public Utilities Commission's (CPUC) dockets, and sophisticated search and generative AI tools designed to deliver insights and answers.

"CWA members are eager to adopt emerging information technologies that will provide advanced analytics and insights for their work and operations. By partnering with HData, our members will be empowered with the tools they need to more efficiently address regulations and rulings that directly impact customers," said Jennifer Capitolo, Executive Director at the CWA.

CWA members will also have access to a comprehensive private upload capability alongside

CPUC information, allowing for efficient data analysis and proposal tracking of drafts, as well as final filings. The goal is to help members develop proposals that benefit their organizations and customers while ensuring they are backed by informed decision-making.

"This partnership with California Water Association marks a major milestone for us as our first collaboration with a water utility trade association," said Hudson Hollister, CEO and Co-Founder at HData. "We're not supporting just one organization; we're paving the way for an entire industry to modernize and become more effective in its regulatory efforts. By making it easier for utilities, regulators, and intervenors to access and understand the context of their decisions, we're facilitating smarter, faster decisions that lead to better outcomes."
