Fasoo Combats Shadow Vulnerabilities and Delivers Full Data Visibility with Advanced DSPM Solutions

BETHESDA , MD, UNITED STATES, November 18, 2024 / EINPresswire.com/ -- Fasoo, the leader in zero trust data security, revolutionizes how organizations safeguard their information assets through its advanced Data Security Posture Management (DSPM).

FASOO

Fasoo - a leader in data-centric security

Fasoo's DSPM solutions leverage data lineage to discover, identify, and map data across unstructured data repositories, empowering organizations to protect against known and unknown vulnerabilities.

"Shadow data and repositories often pose security challenges for organizations due to poor management and lack of oversight, leaving them vulnerable to unauthorized access," stated Jason Sohn, Executive Managing Director at Fasoo. "To mitigate these risks, organizations must enhance visibility into all data and repositories, identify sensitive or regulated data in ECM systems, file servers, and cloud storage, and ensure proper access controls and encryption."

Fasoo Data Radar (FDR) is the cornerstone of Fasoo's DSPM strategy. It provides organizations with a powerful tool for data discovery, classification, and tracking. By automatically identifying and classifying sensitive information, such as PII, financial records, and intellectual property (IP), FDR enables organizations to locate unstructured data across repositories. It continuously scans files and tracks usage, helping organizations reduce shadow IT risks while ensuring compliance with data protection regulations.

Fasoo Integrated Log Manager (FILM) further enhances DSPM capabilities by offering comprehensive visibility into data access and usage across the organization. By consolidating data logs from multiple sources, FILM allows IT administrators to monitor activity patterns and detect anomalies, facilitating organizations to maintain a robust security posture while reducing the risk of data breaches and insider threats.

In addition, Fasoo DSPM complements DLP and Enterprise DRM (EDRM), helping customers

achieve an ideal data security framework. While DSPM identifies and tracks sensitive information, DLP prevents unauthorized data access and sharing, and EDRM secures content through encryption and access controls. Together, these technologies enable comprehensive visibility, protection, and control over data throughout its entire lifecycle, ensuring organizations can safeguard their information assets effectively across all environments.
