Definition:
Managed File Transfer (MFT) Software is a secure, centralized solution for transferring files between systems, organizations, or users in a controlled and reliable manner. MFT software automates the exchange of large volumes of data, often supporting encryption, authentication, and detailed tracking to ensure data security and regulatory compliance. It typically includes features such as file scheduling, auditing, reporting, and integration with enterprise applications and cloud services. By providing enhanced security and tracking, MFT reduces the risks associated with traditional file transfer methods like email or FTP, making it ideal for industries that handle sensitive information, including finance, healthcare, and government. MFT ensures data integrity, compliance with data protection standards, and streamlined workflows across business environments.
