

The Intellectual Property Software Market Reach USD 31.3 Billion by 2032 Growing with 15.6% CAGR

WILMINGTON, DE, UNITED STATES, November 14, 2024 / EINPresswire.com/ -- Allied Market Research published a new report, titled, " The [Intellectual Property Software Market](#) Reach USD 31.3 Billion by 2032 Growing with 15.6% CAGR." The report offers an extensive analysis of key growth strategies, drivers, opportunities, key segment, Porter’s Five Forces analysis, and competitive landscape. This study is a helpful source of information for market players, investors, VPs, stakeholders, and new entrants to gain thorough understanding of the industry and determine steps to be taken to gain competitive advantage.

The global intellectual property software market size was valued at \$7.5 billion in 2022, and is projected to reach \$31.3 billion by 2032, growing at a CAGR of 15.6% from 2023 to 2032.

The key factors such as rapid modernization and increasing number of disputes are driving the growth of the intellectual property software market. However, rise in costs associated with protection and enforcement is hampering the market growth. On the contrary, rapid digitalization is expected to provide lucrative opportunities for the market growth during the forecast period.

The intellectual property software market is segmented into deployment mode, application, industry vertical and region. By deployment mode, the market is bifurcated into on-premise and cloud. By application, the market is divided into licensing, patent management, trademark management, copyright management, contract management and others. Depending on industry vertical, the market is classified into IT & Telecom, BFSI, manufacturing, healthcare, automotive,

retail and others. On the basis of region, the market is studied across North America, Europe, Asia-Pacific and LAMEA.

Depending on deployment type, the on-premise segment held the highest market share in 2022, accounting for more than two-thirds of the global intellectual property software market revenue and is estimated to maintain its leadership status throughout the forecast period. This is attributed to the fact that on-premise solutions allow companies to have greater control over data and intellectual property, thus reducing concerns in relation to data breaches and compliance issues. Therefore, the demand and use of in-premise solutions is more as compared to cloud solutions. However, the cloud segment is projected to register the highest CAGR of 17.9% from 2022 to 2032. This is attributed to the fact that the cloud technology is increasingly integrating with upcoming technologies such as artificial intelligence (AI) and machine learning (ML). These technologies are helping in enhancing patent search capabilities, prior art analysis, and automating intellectual property tasks.

By application, the licensing segment held the highest market share in 2022, accounting for nearly one-third of share in the global intellectual property software market and is estimated to maintain its leadership status throughout the forecast period. This is attributed to the fact that subscription and usage-based licensing model are getting popular. In addition, the filings of intellectual property are growing at an increasing rate and therefore, businesses and organizations are increasingly relying on intellectual property software for efficient management and tracking of license agreements. However, the patent management segment is projected to register the highest CAGR of 20.5% from 2022 to 2032. This is attributed to the fact that large-, medium-, and small-scale companies are growing globally at an increasing rate and are demanding patent management software to secure their rights to ownership of their patents.

Region wise, North America acquired the largest market share in terms of revenue in 2022, accounting for nearly two-fifths of the global intellectual property software market revenue, and is likely to dominate the market during the forecast period. This is attributed to concentration of high-tech industries, which highly demand intellectual property software solutions in the region. However, Asia-Pacific is expected to witness the fastest CAGR of 19.8% from 2022 to 2032 due to increase in economic growth and innovation which is leading to an increase in intellectual property filings in the region.

The report analyzes the profiles of key players operating in the market such as Clarivate Plc, Patsnap, Anaqua Inc., LexisNexis (RELX), Alt Legal Inc., Patseer Technologies Limited, Questel, Patrix AB, Flextrac and Innovation Asset Group, Inc. These players have adopted various

strategies to increase their market penetration and strengthen their position in the market.
