

# Civil Aviation 360 Seeks to Enhance Commercial Jet Performance and Reliability Through Strategic Inventory Expansion

*To help customers enhance commercial jet performance and reliability, ASAP Semiconductor announces plans to expand inventory offerings on Civil Aviation 360.*

ANAHEIM, CA, UNITED STATES,  
November 18, 2024 /

EINPresswire.com/ -- ASAP

Semiconductor, a leading aerospace, defense, and electronic part distributor, has announced today its

plans to carry out an expansive update to its website Civil Aviation 360, enhancing its commercial jet part selection and fulfillment services to support the evolving needs of the aviation industry and its customer base. As of the present, Civil Aviation 360 serves as a platform for ASAP Semiconductor to market its collection of commercial and [business jet parts](#), which range from

hardware and fasteners to connectors and avionics that meet varying specifications and standards.

“

Our inventory enhancement initiative is aimed at addressing the diverse needs of our customers, supporting those that operate commercial jets from Airbus, Boeing, Embraer, and other industry leaders.”

*Joe Faruqui*

As the civil aviation industry continues to undergo rapid growth and adaptation, there has been a significant rise in part demand across market sectors. There are many elements fueling this rise, including an increase in aircraft manufacturing, larger fleets that necessitate standard maintenance, and a trend of retrofitting and refurbishing legacy aircraft with modernized features and technologies. In response to these driving factors, ASAP Semiconductor states that it will strategically expand offerings on the website to target key areas of need, ensuring that project

requirements can be swiftly fulfilled for the goal of improving jet performance with innovative parts and reliable product solutions.

Civil Aviation 360

With an inventory management system and fulfillment services that emphasize data analysis and strategic planning, ASAP Semiconductor will enhance the capacity of Civil Aviation 360 and other operated purchasing platforms to adapt to shifting demands within the civil aviation industry. For instance, the company states that it will continue to utilize data insights and analysis to identify trends in the industry and purchasing habits, guiding inventory updates and ensuring the platform remains aligned with operator needs. These data-driven updates will include new listing resources, enhanced search functionalities, and accurate, up-to-date information that is tied to any newly added parts. By continually bolstering the website's capabilities as inventory expands, Civil Aviation 360 will better support customers in navigating the growing complexity of [commercial jet supply chain](#) requirements.

To further meet the increased demand for aviation reliability solutions, ASAP Semiconductor has also invested in expanding its team and internal processes over the past year. This investment will equip Civil Aviation 360 and other purchasing platforms of the distributor with the ability to accommodate a wider array of customer requests, ranging from high-volume orders to specialized part inquiries. Specialized requests will include services for unlisted items and part alternatives, supporting more niche needs of customers. With a strengthened workforce, ASAP Semiconductor is positioned to enhance customer service operations, allowing representatives to provide more attentive, personalized support for customers who rely on Civil Aviation 360 as a resource for fulfilling time-sensitive, complex requests.

"As ASAP Semiconductor continues to expand Civil Aviation 360's product offerings, our team remains dedicated to advancing procurement solutions that enhance commercial jet reliability and address the demands of civil aviation operators," stated Joe Faruqui, CEO of ASAP Semiconductor. "Through our data-driven inventory management strategies and strong industry relationships, we are well-equipped to respond to evolving market requirements, ensuring customers have access to the critical parts needed to maintain fleet performance and operational efficiency."

Through this platform expansion, Civil Aviation 360 will be prepared to serve as a reliable procurement resource for operators worldwide, bridging the gap between supply and demand for [aftermarket aviation parts](#) and NSN items that support commercial jet reliability. For more information on Civil Aviation 360 and its extensive selection of commercial aviation parts, visit the website at <https://www.civilaviation360.com> or reach out to representatives at ASAP Semiconductor directly.

## About Civil Aviation 360

Civil Aviation 360 is a purchasing platform owned and operated by ASAP Semiconductor, a California-based distributor specializing in procurement, distribution, and project management solutions for those operating within aerospace, defense, marine, and IT hardware sectors. Civil Aviation 360 in particular serves as a dedicated platform for commercial jet operators, repair stations, and maintenance providers to secure project needs with representatives being readily

available to provide consultation services and purchasing support.
