

Warm Water Aquaculture Feed Market to attain a market value of \$60,914.9 million by 2026 | CAGR 3.7%

WILMINGTON, DE, UNITED STATES,
November 18, 2024 /

EINPresswire.com/ -- The [global warm water aquaculture feed market size](#) was \$45,696.2 million in 2018, and is projected to reach \$60,914.9 million by 2026, registering a CAGR of 3.7% from 2019 to 2026.

The world warm water aquaculture feed market growth is primarily supplemented by rise in seafood consumption, growth in aquaculture activity, and functional feed formulations. However, increase in raw material prices and stringent regulations might dissuade the market expansion.

Warm water aquaculture feed are compounded meals formulated for fish, shrimps, and crustaceans by mixing various raw materials such as sunflower, corn, soybean, fish meal, and fish oil. These blends are formulated based on specific requisite of the species and age. Warm water aquaculture feed plays a vital role in aquaculture industry owing to its high nutritional content, immune-resistant, and growth-promoting properties of compounded feed.

With the global population reaching a 7.2 billion mark, the question of food security is on the rise. To combat this adverse situation, production of fish is given a major boost. Fish production has experienced growth over the years, owing to rise in fish farming activities. Furthermore, the government support for fish farming is also boosting the growth of the aquaculture market. Furthermore, R&D expenditure in the field of aquaculture and warm water aquaculture feed is continuously leading to improvements in the aquaculture production, resulting in increased production efficiency, higher product quality for consumers, and higher sustainability.
